Vul- en Sluittechniek b.v.

A suitable
solution for
any **problem**

From problem...

The problem

Companies in the chemical, pharmaceutical, canning and related industries regularly run into problems with their production lines. These problems are frequently related to independent packagings, which are made of glass, plastic or tin. The production speed could be too slow, there could be problems with the production method or the company might consider production costs too high. Lenssen Vul- en Sluittechniek b.v. has answers for all these problems. This company leads the market in supplying suitable solutions in the area of filling and closing technology. Lenssen Vul- en Sluittechniek b.v. takes a company's problem and provides a custom-made solution.

The method

When a company contacts Lenssen Vul- en Sluittechniek b.v., Lenssen Vul- en Sluittechniek b.v. staff carefully take into account both the problem and company in question. This is essential. It enables a solution to be developed that is perfectly suited to the company and its available budget. When the inventory is complete, the

Lenssen Vul- en Sluittechniek b.v. team discuss the situation and come up with a solution for the particular problem, drawing on years of experience. Then this solution is conveyed to all the 'links' in the production process. The most important people in this phase are the employees of the company involved.

The solution

There is usually no standard solution for a problem. Utilisation of a new machine, a different design or production supervision could provide a solution. 'Second life' machines or parts could also help to solve the problem. For this, Lenssen Vul- en Sluittechniek b.v. can rely on its sister company Lenssen Trading Company b.v., which has about 1,500 (used) machines and innumerable parts in stock. If necessary, they can be used to build 'second life' machines and create a perfect solution for the situation at hand. If one machine alone will not do the trick, Lenssen Vul- en Sluittechniek b.v. can combine various technologies and supply a complete production line.

Follow-up

The company also has years of experience with this. When the solution has been developed, Lenssen Vul- en Sluittechniek b.v. staff carry out assembly and installation of the machine or production line. Quick delivery is always a primary consideration. If clients would like, the company can also provide transport, including loading and unloading - all using its own equipment.

When a problem is solved, Lenssen Vul- en Sluittechniek b.v.'s work is not yet finished. The solution is, of course, guaranteed. If needed, one of its own mechanics can be called in. The company also provides machine or production line maintenance. All this shows that Lenssen Vul- en Sluittechniek b.v. has clients' interests at heart and that solving their problems is a top priority. Reliability, quality and customer-oriented service are the basis of its service.

In short:

LS LENSSEN
Vul- en Sluittechniek b.v.

**always supplies
a su
solution**

SEN
nniek b.v.

Lenssen Vul- en Sluittechniek b.v.

• a background overview

Mart Lenssen founded the company in 1989. Previous to this, Lenssen worked in the mushroom industry. He was responsible for general technical supervision and development of new machines and production methods at a leading mushroom processing company. He has also been a consultant for various government authorities. He believes that all of this gave him valuable experience for his subsequent activities. Its working methods proved successful soon after the foundation of Lenssen Vul-en Sluittechniek b.v. The company gradually became one of the leading players on the filling and closing market. In 1995, this led to the establishment of a new company, Lenssen Trading Company b.v.

This sister company is largely involved in the purchasing and sales of used machines. Over the years, Lenssen Vul-en Sluittechniek b.v. has also extended its operations abroad. Today, the company has three foreign branches. The company that started from scratch at the end of the eighties has grown into a renowned, international operation with a total of seventy employees. It is a company that is well established on the international filling and closing market!
